design a high-containment biological laboratory as if it were a general chemistry laboratory due to the high consequences should a biological laboratory's containment be breached. A host of criteria, including safety, comfort and energy efficiency, must be considered when a laboratory is planned or renovated in order to determine the optimal design. Laboratory Design Handbook 1 . Laboratory ...

Analytical Chemistry Lab Manual - La Salle University

laboratory techniques of the analyst improve. The accuracy of an experimental value is best determined by the average value of multiple measurements where x_i represents a measurement and n is the number of measurements. The precision of a set of measurements can be determined by calculating the standard deviation for a set of data where $n-1$ is the degrees of freedom of the system. Actual ...

Experiment 1 - Accuracy and Precision

Accuracy and Precision: Accuracy refers to the closeness of a measured value to a standard or known value. For example, if in lab you obtain a weight measurement of 3.2 kg for a given substance, but the actual or known weight is 10 kg, then your measurement is not accurate.
