This paper attempts to put in perspective the health problems deriving from the current level of mercury exposure in children. Sources of exposure

Children's health and mercury exposure - NCIMS

Mercury is one of five planets that can be seen without using a telescope, Mercury, Venus, Mars, Jupiter and Saturn. When you look at the sky at night, the planets do not twinkle in the way that stars do. Mercury is not very easy to see, but it can be seen low in the west just after sunset or in the east just before dawn.
