Metamaterial cloaking is the usage of metamaterials in an invisibility cloak. This is accomplished by manipulating the paths traversed by light through a novel optical material.

The book is targeted at the first year undergraduate science and engineering students. Starting with oscillations in general, the book moves to interference and diffraction phenomena of waves and concludes with elementary applications of Schrödinger's wave equation in quantum mechanics.

In optics, dispersion is the phenomenon in which the phase velocity of a wave depends on its frequency. Media having this common property may be termed dispersive media.
