Integrating renewables into power systems and markets Today's power systems are designed and built around a small number of large power plants. However, the way we produce and use power is changing rapidly. This requires a redesign of the whole electrical power system - grids, conventional power plants, storage, and demand flexibility. At the same time, power

In particular, the need to move from the fit and forget policy of connecting DG to electric power systems to a policy of integrating DG into power system planning and operation through active management of distribution networks is emphasised. Some of the opportunities that could be exploited to support the integration and hence greater penetration of DG into electric power systems are also ...
