1. Introduction. The availability of up to date information on wastewater generation, treatment, and use is important for policy makers, researchers, and practitioners, as well as public institutions, in order to develop national and local action plans aiming at safe and productive use of wastewater (Sato et al., 2013).

Capacitive deionization (CDI) has attracted the interest of the community investigating water treatment technologies since the mid-1960s. The technology is based on the recognition that high-surface-area electrodes, when electrically charged, can quantitatively adsorb ionic components from water, thereby resulting in desalination.

## **Capacitive deionization (CDI) for desalination and water**

The Sigma Group organized and hosted the Milwaukee Urban Eco-athlon for the second consecutive year. With the support of over 40 participants and several sponsors, over \$10,000 was raised for the Milwaukee

Homeless Veterans Initiative.
